

Features

- Hi Density Deployments
- 4x RJ-45 and 1x SFP ports
- All Ports auto-Negotiation
- Mib Browser Monitoring & Control
- Web Managed System
- Can View μ OTDR Status
- Remote Monitoring of J
- CLI Interface via serial
- Highly Secure System
- Dual Configuration Files

S14

Description

The J-14S module is a four port RJ-45 10/100/1000 managed Ethernet switch with a single SFP 100/1000 port. The switch supports IEEE 802.3/u/x/z and is a fully compliant Layer 2 system. The web management page provides support for reading the p.OTDR status from Optical Zonu SFP modules that include this feature. In the event of a fiber break, the μ OTDR in the SFP will indicate the distance to the fault to within a few feet. The system can be managed through Optical Zonu Web Interface, Mib Browser (SNMP) or with a CLI available via a 5th RJ-45 serial port. The USB port can be connected to the J-Chassis management port for remote monitoring or through USB hub to monitor up to 64 J-Chassis. The J-Chassis system is a flexible 5 or 10 slot 19 inch rack platform that can accept a wide range of modular card systems. These systems include solutions for RF over fiber, RF splitters, GPS links, and wireless communications systems. The S14 switch allows Ethernet data and remote monitoring of alarms to be integrated into a J-Chassis system.

Absolute Maximum Ratings

Parameter	Min	Typical	Max
DC Voltage	11 VDC	12 VDC	13 VDC
DC Current		0.2 A	0.5 A
Storage Temperature	-20°C		85°C
Operating Temperature	0°C	25°C	50°C
